

Azure Container Apps documentation

Azure Container Apps allows you to run containerized applications without worrying about orchestration or infrastructure.

Learn and get started

OVERVIEW

[What is Azure Container Apps?](#)

[Compare container options in Azure](#)

QUICKSTART

[Deploy your first container app](#)

[Deploy from existing container image](#)

CONCEPT

[Core concepts](#)

Build your applications

OVERVIEW

[Develop with .NET](#)

[Develop with Java](#)

[Develop with JavaScript](#)

HOW-TO GUIDE

[Configure scaling and ingress](#)

[Connect microservices](#)

[Manage secrets and configuration](#)

Advanced scenarios

OVERVIEW

[Run Azure Functions serverlessly](#)

[Build microservices with Dapr](#)

[Schedule background jobs](#)

TUTORIAL

[Deploy AI/ML workloads on GPU](#)

[Microservices communication with Dapr](#)

Manage and troubleshoot

HOW-TO GUIDE

[Monitor and observe your apps](#)

[Set up authentication and networking](#)

[Deploy with GitHub Actions](#)

REFERENCE

[Quotas and billing](#)
